Precision Dial Gauges

The well thought-out design, accurate components and robust construction of our Precision Dial Gauge series offer reliability, durability and long working life. The standard features that enhance the quality across our entire product range are:

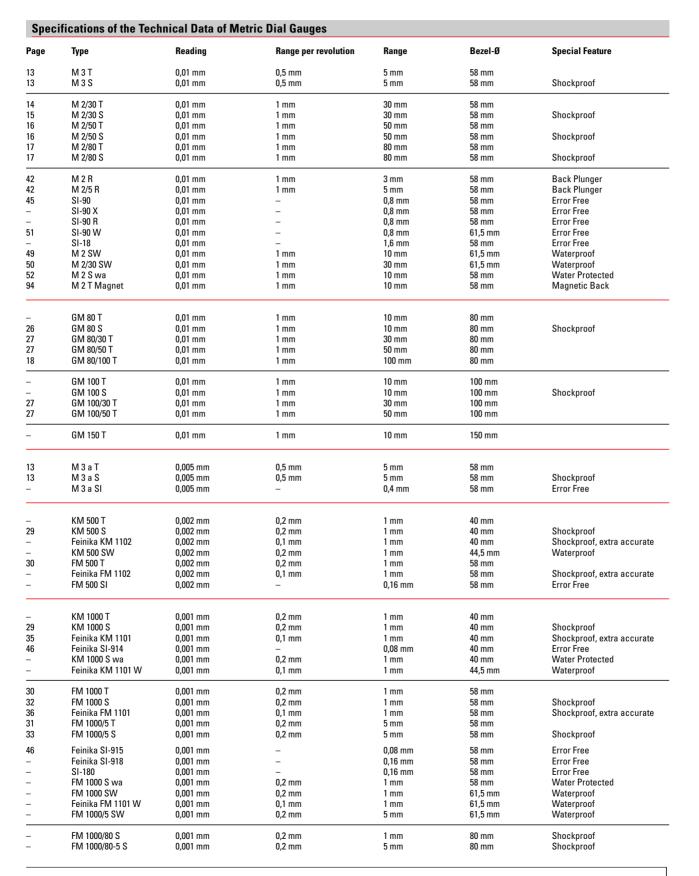

- Calibrations of all Dial Gauges are traceable to national and international standards.
- The final quality control for the whole series includes visual inspection and full mechanical functions' tests.
- To eliminate lateral play and resultant errors each measuring spindle is carefully matched to its stem.

Constitutions of the Technical Date of Matric Diel C

- The bezel together with the outer dial can be rotated through full 360° to set zero in any position.
- The zero position is factory set at 12 o'clock after an allowance of a minimum of 0,1 mm pre-travel from spindle end stop.
- Adjustable tolerance markers to set tolerance limits.
- Standard measuring tip with Ø 3,175 mm steel ball and M 2,5 thread. A range of special tips available as options.
 Standard stem of Ø 8 mm h 6.
- Materials and components selected specifically to ensure a long working life.

Dial Gauge M 2 T

A well thought-out design, the use of high-quality components and materials as well as the precision engineered mechanism guarantee the outstanding quality of the Precision Dial Gauge M 2 T.

All details of this Dial Gauge conform to DIN 878. This applies not only to the outside dimensions but also to allowed tolerances, the measuring pressure and the measuring force reversal range.

Spindle and stem are made of resistant stainless steel.

Precision Dial Gauge M 2 T	
Reading	0,01 mm
Range	10 mm
Range per revolution	1 mm
Bezel-Ø	58 mm
Stem-Ø	8 h 6
Dimensions and accuracy according to	DIN 878
Spindle	lapped
Dimensioned drawing	page 7

Optionally, the Dial Gauge M 2 T is also available with special fittings:

- Dial Gauge M 2 T with fixing screw for the bezel
- Dial Gauge M 2 T with lifting device
- Dial Gauge M 2 T with special transmission ratio (range per revolution = 2, 5 or 10 mm)
- Dial Gauge M 2 T with counter clockwise dial reading
 Dial Gauge M 2 T
- with balanced dial reading 0-50-0
- Dial Gauge M 2 T with increased measuring force
- Dial Gauge M 2 T
 with reduced measuring force
 Dial Operation M 2 T
- Dial Gauge M 2 T with reverse spring traction
- Dial Gauge M 2 T with extended stem
- Dial Gauge M 2 T with two stems: top and bottom

Model M 1 T is a Dial Gauge with the same technical data but with only one large hand and no revolution counter.

6

Dial Gauge M 2 TK

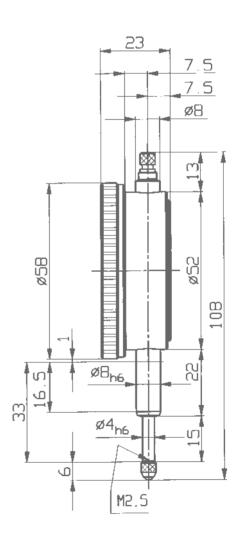

The technical features of Dial Gauge M 2 TK are the same as for model M 2 T.

Both pointers are concentrically arranged on the Dial Gauge M 2 TK. This allows particularly clear reading.

If desired, this Dial Gauge can also be supplied in a shockproof version.

Precision Dial Gauge M 2 TK	
Reading	0,01 mm

Dial Gauge M 2 TOP

D.B.P. No. 36 43 200

We hold German patent no. 36 43 200 for TOP series Dial Gauges.

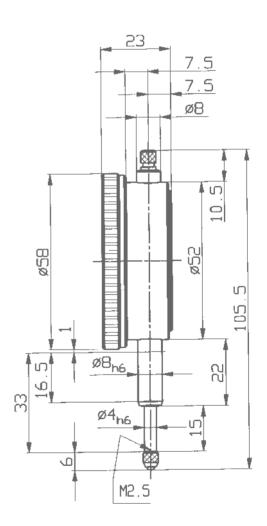

New technological production methods enable us to market it at an astonishingly low price.

All details of this Dial Gauge conform to DIN 878. This applies not only to the dimensions but also to allowed tolerances.

Spindle and stem are made of resistant stainless steel.

Precision Dial Gauge M 2 TOP	
Reading	0,01 mm
Range	10 mm
Range per revolution	1 mm
Bezel-Ø	58 mm
Stem-Ø	8 h 6
Dimensions and accuracy according to	DIN 878
Spindle	lapped
Dimensioned drawing	page 8

Dial Gauge M 2 X

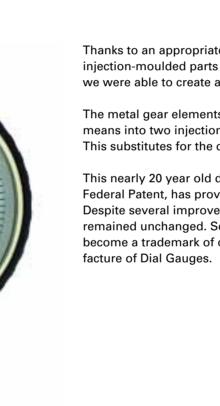

Enabled by the use of a polyamide quality injectionmoulded casing we can offer the Dial Gauge M 2 X having very low weight.

The successful design of the M 2 X Dial Gauge offers high precision at a low price.

All details of this Dial Gauge conform to DIN 878. This applies not only to the dimensions but also to allowed tolerances

Spindle and stem are made of stainless steel.

Precision Dial Gauge M 2 X		
Reading	0,01 mm	
Range	10 mm	
Range per revolution	1 mm	
Bezel-Ø	58 mm	
Stem-Ø	8 h 6	
Dimensions and accuracy according to	DIN 878	
Spindle	lapped

20

30

040

Thanks to an appropriate combination of quality injection-moulded parts and standard metal parts, we were able to create a new design of Dial Gauges.

The metal gear elements are inserted by simple means into two injection moulded parts. This substitutes for the conventional mechanism.

This nearly 20 year old design, protected by German Federal Patent, has proved itself on the market. Despite several improvements the basic concept has remained unchanged. Series 'X' Dial Gauges have become a trademark of our competence in the manufacture of Dial Gauges.

Dial Gauge M 2 SN

shockproof

With this shockproof series, a product of our extensive design expertise, we offer an accurate, reliable and long-lasting Dial Gauge.

A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the gauge movement. The Dial Gauge is robust in operation. Its precision is maintained with practically no limitations.

Spindle and stem are made of resistant stainless steel.

Precision Dial Gauge M 2 SN shockproof		
Reading	0,01 mm	
Range	10 mm	
Range per revolution	1 mm	
Bezel-Ø	58 mm	
Stem-Ø	8 h 6	
Dimensions and accuracy according to	DIN 878	
Spindle	lapped	
Dimensioned drawing	page 11	

Optionally, the Dial Gauge M 2 SN is also available with special fittings:

- Dial Gauge M 2 SN with fixing screw for the bezel
- Dial Gauge M 2 SN with lifting bushing instead of fixed bushing
- Dial Gauge M 2 SN with concentric revolution counter instead of small revolution counter
- Dial Gauge M 2 SN with special transmission ratio (range per revolution = 2, 5 or 10 mm)
- Dial Gauge M 2 SN with wire release for easy spindle lifting
 Dial Gauge M 2 SN
- with counter clockwise dial reading
- Dial Gauge M 2 SN with balanced dial reading 0-50-0
- Dial Gauge M 2 SN with increased measuring force
- Dial Gauge M 2 SN with reduced measuring force
- Dial Gauge M 2 SN with reverse spring traction
- Dial Gauge M 2 SN with extended stem

Dial Gauge M 2 S

with fine adjustment of the pointer, shockproof

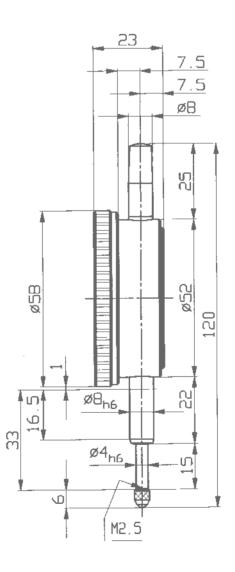

The technical features of Dial Gauge M 2 S are the same as for model M 2 SN.

As additional feature this Dial Gauge offers fine adjustment of the pointer. By simply moving the knurled screw at the top of the Dial Gauge the large hand can be set to the required position and without turning the bezel and the outer dial the Dial Gauge can be easily zeroed.

Removal of the black protective sleeve allows access to the knurled screw.

Dial Gauge M 2 TOP ,S'

shockproof, D.B.P. No. 36 43 200

Except of the additional shockproof system all technical features of the Dial Gauge M 2 TOP ,S' are the same as for the M 2 TOP Dial Gauge on page 8 of this catalogue. Effective impact protection protects the Dial Gauge M 2 TOP ,S' even from hard impacts on the spindle, thereby reducing the risk of damage to the teeth.

Spindle and stem are made of resistant stainless steel.

Precision Dial Gauge M 2 TOP ,S' shockproof		
Reading	0,01 mm

Dial Gauge M 3 S

shockproof

Due to their effective shockproof system these Dial Gauges have an exceptionally long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that shocks against the measuring insert are not transferred to the movement. The Dial Gauges are robust in operation. Their precision is maintained with practically no limitations.

Our models M 3 T and M 3 a T have exactly the same technical data, but are not shockproof.

Spindle and stem are made of resistant stainless steel.

Dial Gauge M 2/30 T

The concentric millimetre pointer allows easy and safe reading of this Dial Gauge. The carefully thoughtout design, the use of selected components and materials as well as the movement perfected by precision engineering guarantee reliable measuring results and a long service life of the Precision Dial Gauge M 2/30 T. The essential parts of the movement are jewelled.

Spindle and stem are made of resistant stainless steel.

Precision Dial Gauge M 2/30 T

Spindle	lapped
Dimensioned drawing	page 15

If desired, the Dial Gauge M 2/30 T is also available with special fittings:

- Dial Gauge M 2/30 T with fixing screw for the bezel
 Dial Course M 2/20 T
- Dial Gauge M 2/30 T with lifting device at the back
- Dial Gauge M 2/30 T with special transmission ratio (range per revolution = 25 or 30 mm)
- Dial Gauge M 2/30 T with counter clockwise dial reading
- Dial Gauge M 2/30 T with balanced dial reading 0-50-0
- Dial Gauge M 2/30 T with increased measuring force
- Dial Gauge M 2/30 T with reduced measuring force
- Dial Gauge M 2/30 T with reverse spring traction
- Dial Gauge M 2/30 T with two stems: top and bottom
- Dial Gauge M 2/30 T with extended stem

We can offer an optional type of Dial Gauge with exactly the same technical data but with a range of 20 mm: **Model M 2/20 T.**

14

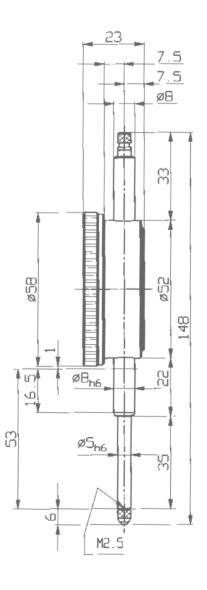

Dial Gauge M 2/30 S

Except of the additional shockproof system all technical features of the Dial Gauge M 2/30 S are the same as for the M 2/30 T Dial Gauge on page 14 of this catalogue. Effective impact protection protects the Dial Gauge M 2/30 S even from hard impacts on the spindle, thereby reducing the risk of damage to the teeth.

Spindle and stem are made of resistant stainless steel.

Käfer

Dial Gauge GM 80/100 T

The concentric millimetre pointer allows easy and safe reading of the Dial Gauge.

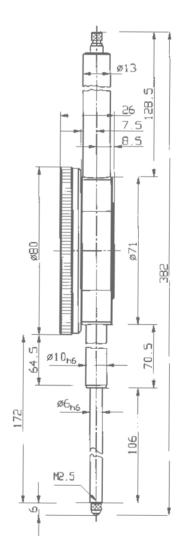

In comparison with Dial Gauges having smaller measuring ranges the type GM 80/100 T has a measuring spindle \emptyset of 6 mm and a stem \emptyset of 10 mm. These features increase the stability and durability of the Dial Gauge.

Dial Gauges with 100 mm measuring range are also available in the following versions:

- bezel-Ø 58 mm (type M 2/100 T)
- bezel-Ø 100 mm (type GM 100/100 T)
- shockproof (type GM 80/100 S)
- with reading of 0,1 mm (type GM 10/100 f)

Dimensioned drawing	page 18

Small Dial Gauge MU 28

The Dial Gauge MU 28 is the smallest model of our broad manufacturing programme. Its extremely small overall dimensions require a special adjustment procedure according to works standards.

Spindles and stems of the Small Dial Gauges MU 28 and KM 6 T are made of resistant stainless steel.

Small Dial Gauge MU 28	
Reading	0,01 mm
Range	3,5 mm
Range per revolution	0,5 mm
Bezel-Ø	28 mm
Stem-Ø	8 h 6
Accuracy according to	
works standard	0.0200.9.0012, edition 1/1996
Spindle	lapped
Dimensioned drawing	page 19

Small Dial Gauge KM 6 T

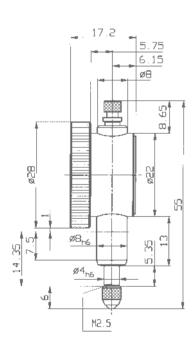

All allowed tolerances of the Small Dial Gauge KM 6 T conform to DIN 878-D.

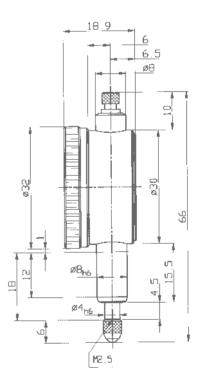

If desired, the Small Dial Gauge KM 6 T is also available with special fittings:

- KM 6 T with lifting device
- KM 6 T with counter clockwise dial reading
- KM 6 T with balanced dial reading 0-25-0
- KM 6 T with increased or reduced measuring force

Small Dial Gauge KM 6 T	
Reading	0,01 mm
Range	3 mm
Range per revolution	0,5 mm
Bezel-Ø	32 mm
Stem-Ø	8 h 6
Dimensions and accuracy according to	DIN 878
Spindle	lapped
Dimensioned drawing	page 19

Small Dial Gauge KM 4 T

Our Small Dial Gauges have 40 mm Ø bezel. As standard they have 0,5 mm travel range per revolution and 50 graduations on the dial. This offers the advantage of a clear and easily readable Dial Gauge.

Spindle and stem are made of resistant stainless steel.

Small Dial Gauge KM 4 T

Dimensioned drawing	same as KM 10)00 S on page 29

If desired, the Dial Gauge KM 4 S is also available with special fittings:

- Small Dial Gauge KM 4 S with fixing screw for the bezel
- Small Dial Gauge KM 4 S with lifting device
- Small Dial Gauge KM 4 S with lifting bushing instead of fixed bushing
- Small Dial Gauge KM 4 S with special transmission ratio range per revolution = 1 mm
- Small Dial Gauge KM 4 S with counter clockwise reading
- Small Dial Gauge KM 4 S with balanced dial reading 0-25-0
- Small Dial Gauge KM 4 S with increased measuring force
- Small Dial Gauge KM 4 S with reduced measuring force
- Small Dial Gauge KM 4 S with extended stem (length from casing 29,5 mm)

Type KM 4/5 S illustrated on the opposite page can also be manufactured according to the above listed versions.

24

Small Dial Gauge KM 4/5 S

shockproof

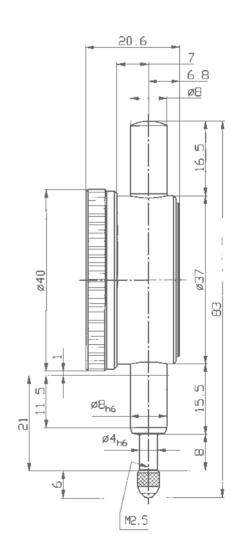

Except of the longer measuring range all technical features of the Small Dial Gauge KM 4/5 S are the same as for model KM 4 S.

All details of this Small Dial Gauge conform to DIN 878. This applies not only to the outside dimensions but also to allowed tolerances, the measuring force and the measuring force reversal range.

Spindle and stem are made of resistant stainless steel.

High Precision Dial Gauges

Our High Precision Dial Gauges are high-resolution gauges with 0,001 mm or 0,002 mm graduations and 0,1 mm or 0,2 mm measuring distance per pointer revolution. The high magnification gear train and high-resolution dials allow a very precise reading of the measured value.

The well thought-out design as well as the extremely precise, while robust in operation, execution of our High Precision Dial Gauges with precision gear movement guarantee for their reliability and long service life. The following quality features apply to our entire manufacturing programme:

- Highly responsive movements.
- Precisely matched measuring spindles and stems to minimise lateral play.
- All gear pivots run in high-class ceramic bearings.
- A threaded protection sleeve to prevent ingress of contaminants.
- All shockproof models contain an effective impact protection sleeve.

As standard High Precision Dial Gauges are manufactured with measuring ranges up to 5 mm. However the gear movements can accommodate ranges up to 10 mm. Please contact us if you require longer measuring ranges.

DIN 878 does not include these High Precision Dial Gauges. They are subject to a strict works standard. For the High Precision Dial Gauges with precision gear movements listed in the following table our works standard 0.0500.9.0001, edition 4/2001 applies.

Please see pages 34 – 36 for our series ,FEINIKA' High Precision Dial Gauges.

High Precision Dial Gauges with the movement of Comparator Gauges

The FEINIKA High Precision Dial Gauges have similar movements to those of our range of COMPIKA Comparator Gauges. The travel of the plunger is transmitted and magnified by means of a lever device to the hand. This lever transmission has two advantages. It provides extremely high accuracy, as well as an effective shockproof system.

The following quality features apply to our entire manufacturing programme of FEINIKA High Precision Dial Gauges:

- Effective shockproof system.
- With metal bezel.
- Lifting cap to raise the plunger easily.

- Hardened plunger to protect against damage.
- Additional over-travel for easy insertion of test pieces under the measuring tip.
- Highly responsive movements.
- Precisely matched plunger and stem to minimise lateral play.
- All gear pivots run in high-class ruby bearings.
- A lifting cap to prevent ingress of contaminants.

DIN 878 does not include these High Precision Dial Gauges. So we subject these gauges to more stringent standards as laid down in the table 0.0500.9.0010, edition 1/2001 of our works standard.

Technical data for Metric High Precision Dial Gauges of the series Feinik

Small Dial Gauge Feinika KM 1101

shockproof

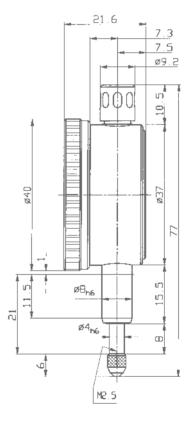

High Precision Dial Gauges Feinika have a scale with 100 graduations for one pointer revolution of 0,1 mm. This enables very precise read-off results.

The travel of the plunger is transmitted by means of a lever device to the hand. This lever transmission of the movement has two advantages. It provides extremely high accuracy, as well as an effective shockproof system.

Spindle and stem are made of resistant stainless steel.

Dial Gauges with 0,1 mm reading

Dial Gauges with 0,1 mm graduations are supplied without tolerance pointers as standard. On request they can be supplied with tolerance pointers at no extra charge.

Because of the rather course transmission ratio effective on Dial Gauges with a reading of 0,1 mm the danger of damage to the gearing through shocks received by the spindle is considerably minimised. In this range we only offer Standard Dial Gauges without impact protection. Offers for Dial Gauges with a reading of 0,1 mm and shockproof are available on request.

These 0,1 mm reading gauges are also available in waterproof and back-plunger versions. Please contact us for price and availability.

On Dial Gauges KM 5 a, KM 10 a and M 10 a one revolution of the pointer corresponds to the entire measuring range. For this reason they are specially suitable for applications benefiting from a slave pointer. A functional description of Dial Gauges with slave pointers is given on page 67 of the catalogue.

The carefully thought-out design as well as the operationally robust execution of our Dial Gauges with a reading of 0,1 mm guarantee reliable measuring results and a long service life.

Dial Gauges with a reading of 0,1 mm are not included in DIN 878. They are subject to a strict works standard. For the models listed in the following table our works standard 0.0100.9.0004, edition 2/1990 applies.

Туре	Reading	Range per revolution	Range	Bezel-Ø	Special Feature

On the Dial Gauge M 2/5 R the dimension of 7,5 mm at Ø 46,5 mm in the above dimensioned drawing has been increased to 9,5 mm and the overall length from 68,5 mm to 70,5 mm.

The Error Free Dial Gauge SI-90 R with 0,8 mm measuring range, 3 mm overtravel and back plunger possesses identical dimensions as model M 2 R.

Error Free Dial Gauges

with overtravel and limited measuring range

In order to avoid reading errors the measuring range of these Dial Gauges is limited to slightly less than one revolution of the pointer. Therefore a measurement can only be performed within the range of one revolution of the hand guaranteeing error free reading of the Dial Gauge.

The following quality features apply with exception of model SI-9/0,1 to our entire manufacturing programme of Error Free Dial Gauges:

- The large overtravel assists with the insertion of test pieces into the measuring device.
- In conformity with DIN-standard 878 the circular scale can only be rotated by 36°.
- Double safeguard for the limitation of the measuring range:
 - a) Stop in the movement
 - b) Stop on the facet ring
- Effective impact protection

Error Free Dial Gauges designated with capital letter W in the order code are waterproof. A detailed description of the model series of Waterproof Dial Gauges can be found on pages **47** to **51** of the catalogue.

The Dial Gauge SI-90 X from our series X incorporates quality injection moulded components combined with conventional metal components. This design concept offers high precision at an astonishingly low price.

On request we can also supply Error Free Dial Gauges with bezel that can be rotated through 360°.

Technical data for Metric Error Free Dial Gauges

Error Free Dial Gauge SI-45

shockproof, with overtravel

Error Free Dial Gauge SI-45/0,8

shockproof, with overtravel

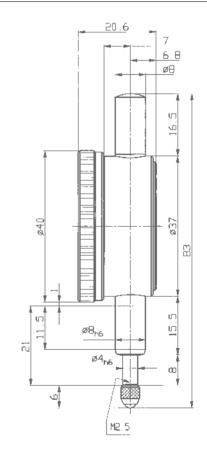

Due to their high-class impact protection the Error Free Dial Gauges SI-45 and SI-45/0,8 offer an extremely long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear. The Dial Gauges are robust in operation. Their precision is maintained with practically no limitations.

Spindle and stem are made of resistant stainless steel.

Error Free Dial Gauge SI-45 shockproof, with overtravel	
Reading	0,01 mm
Range	0,4 mm
Overtravel	4,5 mm
Bezel-Ø	40 mm

Dimensioned drawing	page 44

On request the Safety Dial Gauges SI-45 and SI-45/0,8 can also be supplied as waterproof execution. Their type designations are SI-45 W and SI-45/0,8 W. Please note that in this case the dimensions of the above drawing do not apply.

Error Free Dial Gauge SI-90

shockproof, with overtravel

Due to its high-class impact protection the Safety Dial Gauge SI-90 offers an extremely long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear. The Dial Gauge is robust in operation. Its precision is maintained with practically no limitations.

Spindle and stem are made of resistant stainless steel.

Dimensioned drawing	page 11	

If desired, the Dial Gauge SI-90 is available with special fittings:

- Dial Gauge SI-90 with fixing screw for the bezel
- Dial Gauge SI-90 with lifting cap instead of screwed-on protective cap
- Dial Gauge SI-90 with wire release
- Dial Gauge SI-90
- with bezel that can be rotated through 360° **Dial Gauge SI-90**
- with increased measuring force
- Dial Gauge SI-90 with reduced measuring force
- Dial Gauge SI-90 with extended stem

shockproof, with overtravel

Error Free Dial Gauge Feinika SI-914 Error Free Dial Gauge Feinika SI-915

shockproof, with overtravel

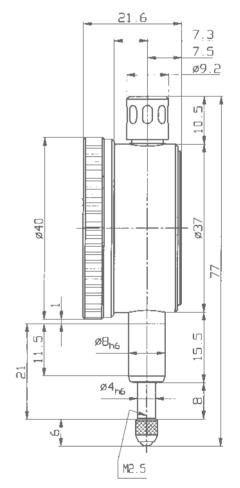

Dial Gauges Feinika possess a movement similar to that of Comparator Gauges. The combined gear and lever transmission guarantees high accuracy and low hysteresis. Dial Gauges Feinika are therefore best suited as error free 0,001 mm-reading Dial Gauges.

Dial Gauges Feinika are supplied as standard execution with lifting bush and metal bezel.

Error Free Dial Gauge SI-914 shockproof, with overtravel

On request the Safety Dial Gauges SI-914 and SI-915 can also be supplied as waterproof execution. Their type designations are SI-914 W and SI-915 W. Please note that in this case the dimensions of the above drawing do not apply.

Waterproof Dial Gauges

shockproof

In the workshop it is unavoidable that Precision Dial Gauges are in contact with oil, water mist or dust. Our range of hermetically sealed Waterproof Dial Gauges has been specially designed to withstand these conditions. These extremely robust Precision Dial Gauges conforming to protection class IP 67 bear the order code 'W'.

Their features are:

 A flexible rubber bellows is fitted where the spindle enters the stem.

- The upper end of the measuring spindle is sealed by a safety cap and an 'O' ring.
- A new design of the metal bezel and its assembly produces a perfect seal. Its special features include 'O' rings, flat glasses and a screwed-on brass ring.
- An additional 'O' ring is placed between the rotating outer ring and the indicator's metal housing.
- The back plate is fitted in such a way that no foreign matter can enter.
- Effective shockproof system.

Other Dial Gauges from our manufacturing programme with a measuring range of maximum 30 mm can also be supplied water- and oilproof. Please request our respective offer.

47

Small Dial Gauge KM 4 SW

waterproof, shockproof

Small Dial Gauge KM 4/5 SW

waterproof, shockproof

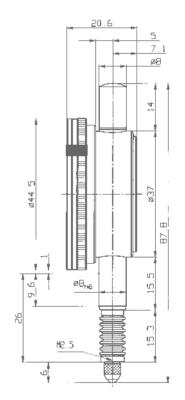

Due to their high-class impact protection the Small Dial Gauges KM 4 SW and KM 4/5 SW offer an extremely long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear. These Dial Gauges are robust in operation. Their precision is maintained with practically no limitations.

Spindle and stem are made of resistant stainless steel.

Dimensioned drawing	page 48

The above dimensioned drawing also applies to the Safety Dial Gauge SI-45 W.

On type KM 4/5 SW the dimension 14 mm at the top is 17 mm instead. The overall length thus becomes 90,8 mm instead of 87,8 mm.

Dial Gauge M 2 SW

waterproof, shockproof

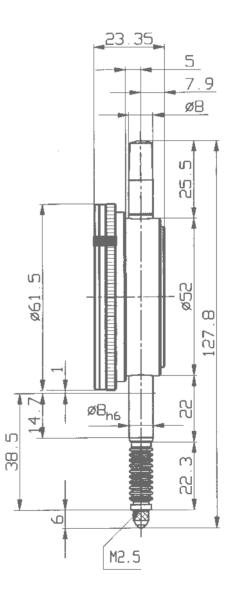

The waterproof Precision Dial Gauge M 2 SW also has a bezel which can be rotated through 360°.

When changing the measuring insert attention has to be paid that the spacer disc between the measuring insert and the rubber bellows is put back again. Otherwise the Dial Gauge is no longer sealed against the ingress of contamination.

Spindle and stem are made of resistant stainless steel.

Käfer

Dial Gauge M 2/30 SW

waterproof, shockproof

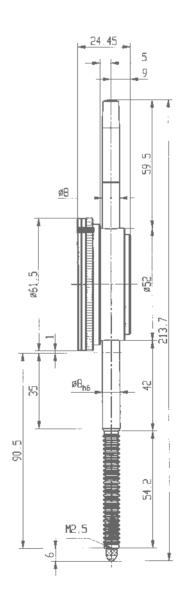

For the first time we are introducing with this catalogue issue type M 2/30 SW, a Precision Dial Gauge with 30 mm measuring range which is waterproof according to protection class IP 67.

On request we are also offering a waterproof model with 30 mm measuring range conforming to IP 53.

Spindle and stem are made of resistant stainless steel.

On request other Dial Gauges from our manufacturing programme are available in waterproof execution.

- Dial Gauge M 3 SW
- Dial Gauge M 3 a SW
- Dial Gauge SI-18 W

Please request our offers.

<u>Dial Gauge M 2 S wa</u>

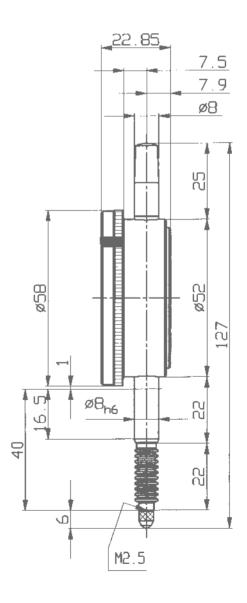

water protected, shockproof

Water protected Dial Gauges are to be recommended for applications where splash water prevails. These Dial Gauges conforming to protection class **IP53** bear the order code 'wa'.

The transparent front cover, made of knock resistant plastics, with its anti-reflective coating reduces shadows on the dial face and makes the Dial Gauge M 2 S wa very easy to read even at awkward angles that may often be found in fixture applications.

All types of the above table have a stem-Ø of 8 mm h 6 and a thread M 2,5. The Dial Gauges will be supplied with flat backs. A mounting lug is available at extra charge.

Inch Reading Dial Gauges are also available with measurements equivalent to the American Standard ANSI B89.1.10M-2001. These instruments have a stem- \emptyset of 3/8'', the thread for the feeler is 4/48 NF. For details concerning this Dial Gauge series please see the table on pages 57 and 58.

äfer

Inch Dial Gauge ZO 3 T

Inch Dial Gauge ZO3S

shockproof

The Dial Gauges ZO 3 T and ZO 3 S will be supplied with continuous dial reading and flat backs. If required, balanced dials and lug backs are available at extra charge.

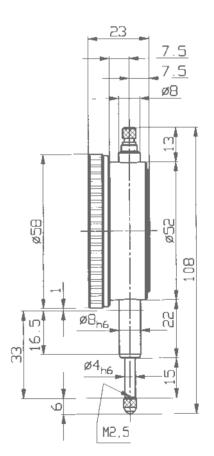

Due to its effective shockproof system the Dial Gauge ZO 3 S has an exceptionally long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear. An additional feature of this Dial Gauge is the incorporated fine adjustment of the pointer. By turning the knurled screw at the top, the large hand can be easily set to 0 without turning the bezel and the outer dial.

DIN-standard 878 applies to all dimensions and permissible deviation spans analogous. Spindle and stem are made of resistant stainless steel.

Small Inch Dial Gauge KZO 6 T

Small Inch Dial Gauge KFZO S

shockproof

Type KZO 6 T is the smallest Inch Dial Gauge in our broad manufacturing programme. Nonetheless we apply the DIN-standard 878 D analogous for all permissible deviation spans of the Dial Gauge KZO 6 T. Its dimensions correspond to the metric version KM 6 T on page 19.

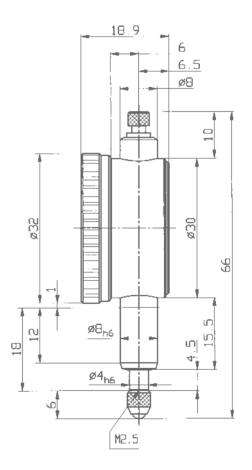

Due to its effective shockproof system the Small Inch Dial Gauge KFZO S has an exceptionally long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear.

Spindle and stem are made of resistant stainless steel.

All the types of the above table have measurements equivalent to the American Standard ANSI B 89. 1/10M-2001. These instruments have a stem- \emptyset of ${}^{3}/_{8}{}''$, the thread for the feeler is 4/48 NF.

In standard execution the Dial Gauges will be delivered without fixing device for the bezel and flat back. At extra charge executions with fixing screw as well as lug back are available. Please add the type code FS for fixing screw resp. LB for lug back should you require the Dial Gauge with these features. Extra charges can be found in our price list below the listing of Inch Dial Gauges.

Additional accessories are available for Inch Dial Gauges:

- Offset lug back
- Screw type back
- Special feelers (see pages 81 and 82)

Inch reading Dial Gauges are also available with a stem-Ø 8 mm h 6 and a thread M 2,5. For details of this Dial Gauge Series please see the table on page 53.

Small Inch Dial Gauges KZ 4/5 Sb and KZ 3/5 Sb

to ANSI standard, shockproof

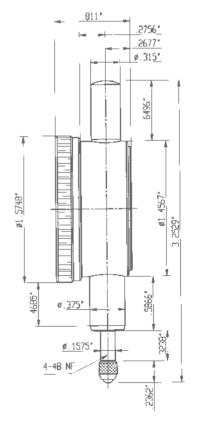

The high-class impact protection of the Inch Dial Gauges KZ 4/5 Sb and KZ 3/5 Sb results in an exceptionally long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear. The Dial Gauges are robust in operation. Their precision is maintained with practically no limitations.

Spindle and stem are made of resistant stainless steel.

On model KZ 3/5 Sb the spindle is shorter by .0285" thus reducing the overall length to 3.2244" from 3.2529".

Inch Dial Gauge Z 2/8 SNb

to ANSI standard, shockproof

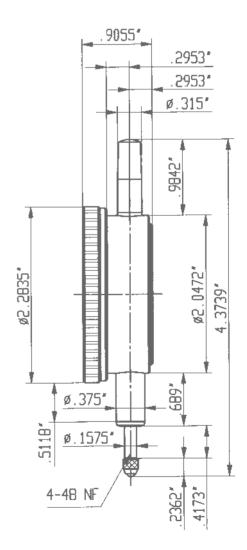

With this shockproof series, a product of our extensive design expertise, we offer an accurate, reliable and long-lasting Dial Gauge.

A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear. The Dial Gauge is robust in operation. Its precision is maintained with practically no limitations.

Spindle and stem are made of resistant stainless steel.

Inch Dial Gauge Z 2/30 Ta

to ANSI standard

Inch Dial Gauge Z 3/30 Ta

to ANSI standard

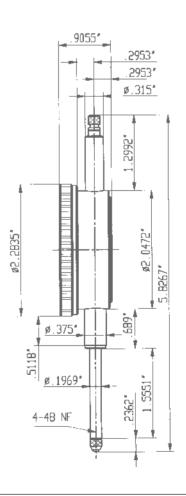

The concentric millimetre pointer allows an easy and safe reading of these Dial Gauges. The carefully thought out design, the use of selected components and materials as well as the movement perfected by precision engineering guarantee reliable measuring results and a long service life of the Precision Dial Gauges Z 2/30 Ta and Z 3/30 Ta.

The essential parts of the movement are jewelled. Spindle and stem are made of resistant stainless steel.

Inch Dial Gauge Feinika FZ 1101

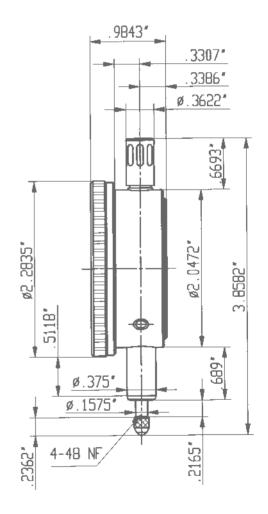

shockproof

With our series of Feinika High Precision Dial Gauges the travel of the plunger is transmitted and magnified by means of a lever device to the hand. This lever transmission of the movement has two advantages. It provides extremely high accuracy, as well as an effective shockproof system.

Spindle and stem are made of resistant stainless steel.

Error Free Inch Dial Gauge Z2 SI

to ANSI, with overtravel, shockproof

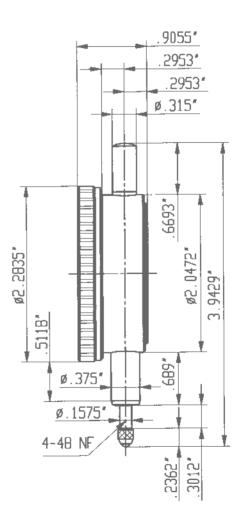

In order to avoid reading errors the measuring ranges of our Error Free Dial Gauges series ,SI' are limited to slightly less than one revolution of the hand. Therefore a measurement can only be performed within the range of one revolution of the hand guaranteeing an error free reading of the Dial Gauges.

The high-class impact protection of the Error Free Dial Gauge Z2 SI results in an exceptionally long service life. A gear rack sleeve covering the length of the spindle is arranged and sprung in such a way that the shocks against the measuring insert are not transferred to the measuring gear.

Spindle and stem are made of resistant stainless steel.

äfer

Inch Dial Gauge Z3 SNW

waterproof, shockproof

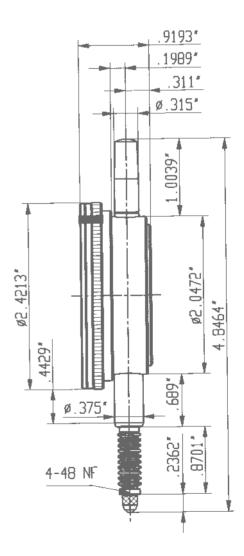

The technical features of our waterproof Inch Dial Gauges are the same as for the metric models on page 47 of this catalogue.

When changing the measuring insert attention has to be paid that the spacer disc between the measuring insert and the rubber bellows is put back again. Otherwise the Dial Gauge is no longer sealed against the ingress of contamination.

Spindle and stem are made of resistant stainless steel.

Additional Equipment for Mechanical Dial Gauges

Locking screw

The knurled bezel on Dial Gauges can be turned with the outer dials. This allows zero point adjustment.

In order to avoid unintentional adjustment, Dial Gauges can be supplied with locking plate and knurled screw at extra charge for the purpose of locking the bezel.

Following Dial Gauges are available with the locking screw:

- range not greater than 80 mm
- no model of the X series
- bezel-Ø 40 or 58 mm

Retrofitting of this device to existing Dial Gauges is not possible.

Slave Pointer

On Dial Gauges with slave pointer facility, the displayed measured value remains visible after the dial gauge pointer returns to its original setting, because the additional pointer dragged along with it stays at the position from where the main pointer returns.

It must be noted that the slave pointer facility is only effective within one pointer revolution.

Following Dial Gauges without concentric small hands are available with a slave pointer device:

- reading 0,1 or 0,01 mm
- not shockproof
- bezel Ø 40 or 58 mm

Retrofitting of this device to existing Dial Gauges is possible.

Lifting Device

The lifting lever permits quick lifting of the spindle. The lever itself can be swivelled and permits its use in the most comfortable position.

Lifting devices are available in 2 sizes for Small Dial Gauges with 40 mm Ø and for standard Dial Gauge models with 58 mm Ø.

Following Dial Gauges are available with lifting device:

- range up to 10 mm
- bezel Ø 40 or 58 mm

Retrofitting of this device is possible on condition that the Dial Gauge is not fitted with a protection sleeve and that it is not a model of the X-series.

Lifting devices for Dial Gauges with 30 mm range are available on request.

Additional Equipment for Mechanical Dial Gauges

Magnetic Back

Magnetic backs allow Dial Gauges to be used without a holder and without a stand. The magnet, made of sinter metal does in no way affect the mechanism of the Dial Gauge.

Magnetic backs are available in 2 sizes for the following Dial Gauges:

- Dial Gauges with 40 mm (1 ⁹/₁₆") Ø
- Dial Gauges with 58 mm (2 1/4") Ø or larger

Retrofitting of magnetic backs is possible.

Lug Back

Lug backs are available in 3 sizes for:

- Dial Gauges with 32 mm (1 ¹³/₅₀") Ø
- Dial Gauges with 40 mm (1 ⁹/₁₆") Ø

• Dial Gauges with 58 mm (2 1/4") Ø or larger. The standard bore diameter in the fixing lug is 5 mm. Delivery of Dial Gauges conforming to American standards with 1/4" bore diameter. On request a bore diameter of 6 mm is also possible.

Retrofitting of lug backs is possible. Offset lug backs are available on request.

Special Backs

All standard type Dial Gauges will be delivered with flat backs. Delivery of special back executions on request. Retrofitting is possible.

Post type backs with post Ø 12,7 mm (.500")

a) Back with drawing number 020603/2 is for models AGD1 (40 mm Ø)
b) Back with drawing number 020603/1 is for models AGD 2 (58 mm Ø)

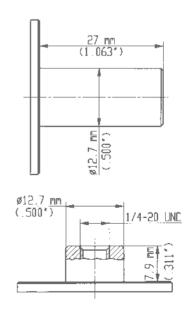

Screw type backs with female thread 1/4-20UNC

a) Back with drawing number 020603/4 is for models AGD1 (40 mm Ø)

b) Back with drawing number 020603/3 is for models AGD 2 (58 mm Ø)

Back with adjustable bracket

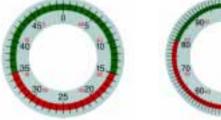

a) Back with drawing number 020308/3 is for models AGD 2 (58 mm Ø)

Special Dials for mechanical Dial Gauges

The colours red, green and yellow are available. Please indicate in your order text what segments of the dial should be marked red, green or yellow.

Dials for anti-clockwise reading

Unless otherwise stated on the order both the inner and outer dials are supplied for anti-clockwise reading.

Balanced Dials

Unless otherwise stated on the order only the outer dial is supplied with balanced numbers. The inner dial is supplied with numbers for clockwise reading.

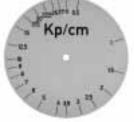

Custom-made Dials

We can supply custom-made dials with special logos, with special numbers, with special imprints and in special colours. Both the inner and outer dials can be supplied in custom-made versions.

Special dials are available for many models but not for all Dial Gauges. Please request our offers.

Digital Dial Gauge MD 12 T

Digital Dial Gauge FMD 12 T

The digital display with its large numerals makes it very simple to use this Dial Gauge. Function and display section can be rotated through 270°. The sturdy construction guarantees precision and reliability.

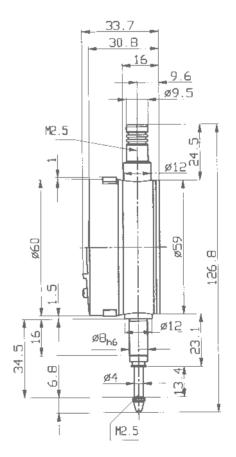

Following functions of the Digital Dial Gauges MD 12 T and FMD 12 T can be used:

- Zero setting
- Data transmission Ref I / Ref II

Digital Dial Gauge MD 12 T	
Resolution	0,01 mm / .0005"
Range	12,5 mm / .5"
Digital display LCD, height of digits	8,5 mm
Measuring system	inductive
Power supply	on Lithium battery 3 V
Battery life	3000 h
Output	RS 232, optoelectronic
Working temperature	+5 °C - +40 °C
Maximum error	20 µm / .0008"
Dimensioned drawing	page 72

Digital Dial Gauge FMD 12 T	
Resolution	0,001 mm / .00005"
Range	12,5 mm / .5"
Digital display LCD, height of digits	8,5 mm
Measuring system	inductive
Power supply	on Lithium battery 3 V
Battery life	3000 h
Output	RS 232, optoelectronic
Working temperature	+5 °C - +40 °C
Maximum error	5 μm / .0002"
Dimensioned drawing	page 72

Digital Dial Gauge MD 25 T

Digital Dial Gauge FMD 25 T

The digital display with its large numerals makes it very simple to use this Dial Gauge. Function and display section can be rotated through 270°. The sturdy construction guarantees precision and reliability.

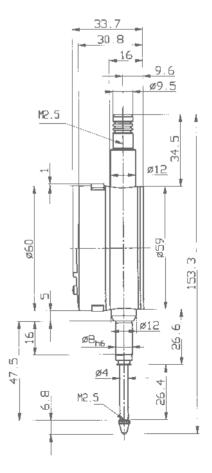

Following functions of the Digital Dial Gauges MD 25 T and FMD 25 T can be used:

- Zero setting
- Data transmission
 Bef I / Bef II
- mm/inch selectionMemory set Hold
- Ref I / Ref IIPreset value recall
- Selection of measuring direction
 Selection of measuring direction
 - Selection of reading (only FMD 25 T)
 - Data request by any ASCII Code

Digital Dial Gauge MD 25 T

<u>Small Digital Dial Gauge KMD 12 T</u>

Following functions of the Small Digital Dial Gauge KMD 12 T can be used:

- Zero setting
- mm/inch selection
- Absolute / relative mode
- Preset value recall
- Data transmission
- Selection of measuring direction

The dovetail at the rear offers an additional fixing option.

The standard feeler can be exchanged for specially styled feelers as listed on pages 79 and 80.

Comparator Gauges Compika

The Comparator Gauges Compika offer a high degree of security and precision. They are based on a solid and well thought-out construction taking into account the latest technology. They are manufactured by the most up-to-date methods.

A cable release is supplied with each Comparator Gauge free.

The following quality features characterize our manufacturing programme of Comparator Gauges Compika:

- Their design conforms to the requirements of DIN 879-1. This applies not only to the dimensions but also to permitted spans of error, hysteresis and measuring pressure.
- Effective shockproof system.
- Pinions and shafts of the movement are jewelled.

- After removal of the safety cap the adjustment screw on top of the case allows simple and safe zero setting of the instrument over the total measuring range.
- A safety cap prevents unintentional turning of the fine adjustment facility.
- Stem and spindle are made of hardened stainless steel.
- The measuring spindles are very sensitive on account of their accurate guides.
- Additional overtravel assists with the insertion of workpieces into the measuring device.
- The clear scale is shadow free.
- The red tolerance markers are easy to recognize and to set.
- The measuring pressure is approximately 1 N.
 On request all models are available with a pressure of 0,5 N.

Summary of important technical details of Comparator Gauges	es Compika
---	------------

Metric types	Reading	Range	Dial reading	Overtravel	Special feature
Compika 101, 101 B	0,01 mm	0,5 mm	25-0-25	2,5 mm	Shockproof

Types with order code 'B' have shortened measuring spindles. These can be used in most precision inside measuring instruments or measuring devices available on the market today.

Comparator Gauge Compika 1001

shockproof, with overtravel

The Comparator Gauge Compika 1001 is manufactured conforming to DIN 879-1.

The precisely guided measuring spindle and the use of selected materials make the Comparator Gauge Compika 1001 extremely wear-resistant.

Stem and spindle are made of resistant stainless steel.

Comparator Gauge Compika 1001 shockproof, with overtravel		
Reading	0,001 mm	
Range	0,1 mm	
Dial reading	50-0-50	
Bezel-Ø	62 mm	
Stem-Ø	8 h 6	
Dimensions and accuracy according to	DIN 879-1	
Spindle	lapped	
Dimensioned drawing	page 78	

Comparator Gauge Compika 1001 B

shockproof, with overtravel

The Comparator Gauge Compika 1001 B is identical to the model Compika 1001 except for the reduced protrusion of the measuring spindle beyond the stem of 6 mm instead of 14 mm. This gauge fits most precision inside measuring instruments and measuring devices available on the market.

Stem and spindle are made of resistant stainless steel.

Comparator Gauge Compika 1001 B shockproof, with overtravel			
Reading	0,001 mm		
Range	0,1 mm		
Dial reading	50-0-50		
Bezel-Ø	62 mm		
Stem-Ø	8 h 6

Spindle	lapped		
Dimensioned drawing	on request		

If desired, the Comparator Gauges Compika are also available with special fittings:

- Comparator Gauge Compika with measuring force reduced to 0,5 N
- Comparator Gauge Compika with increased measuring force
- Comparator Gauge Compika with special dial
- Comparator Gauge Compika with stem length 85 mm

Please request our offers.

Comparator Gauge Compika 1001 wa

water protected, shockproof, with overtravel

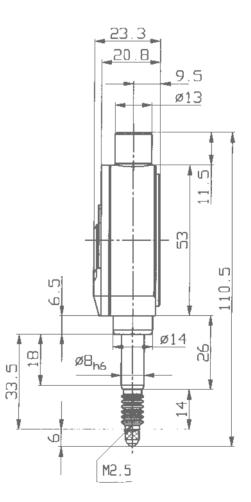

The use of a water protected Comparator Gauge is recommended for applications in splash water environments. This execution, conforming to protection class IP 53, features the following:

- A flexible rubber bellows is fitted where the spindle enters the stem.
- The back is sealed with a rubber ring.

äfer

Comparator Gauge Compika 1005 Z

shockproof, with overtravel

The Comparator Gauge Compika 1005 Z is manufactured conforming to DIN 879-1.

The precisely guided measuring spindle and the use of selected materials make the Comparator Gauge Compika 1005 Z extremely wear-resistant.

Stem and spindle are made of resistant stainless steel.

Comparator Gauge Compika 501 Z

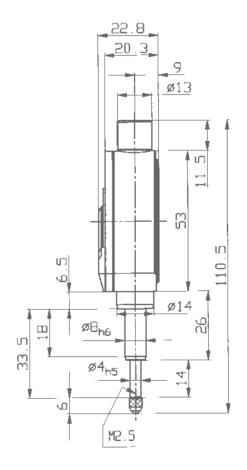

shockproof, with overtravel

Comparator Gauges with Inch reading are also available as short version B. They have a measuring spindle shortened by 8 mm to protrude 6 mm beyond the stem. These gauges fit most precision inside measuring instruments and measuring devices available on the market.

Stem and spindle are made of resistant stainless steel.

Dial Test Indicators

Most modern methods are applied in the production of our high quality Dial Test Indicators. They are both sensitive and shock-resistant. Here are some of the advantages applicable to the whole series:

- All features of the models reading up to 1 mm measuring range conform to DIN 2270. This applies to all deviation spans, the measuring force and the hysteresis error of the measuring force.
- Automatic change of the direction of measurement.
- Indication clockwise in all types.

- Precise components, running in ceramic bearings, warrant highest precision throughout.
- Precision bearing for the lever shaft.
- Body with 3 dovetail slides for clamping the stem and other equipment.
- Body hard-chromed in order to protect the dovetail slides against damage.
- Tungsten carbide ball 2 mm Ø in measuring inserts.
- Dial adjustable by knurled bezel.
- Supplied in tasteful boxes with transparent cover with 1 stem Ø 8 mm h 6 and 1 spanner for changing the feelers.

Dial Test Indicator K 30

Dial Test Indicator K 40

Käfer

The friction clutch mechanism of these Dial Test Indicators provides a very effective shockproof system. Standard executions are equipped with contact points having a tungsten carbide ball of 2 mm diameter. On request contact points with ball diameters of 0,4 mm, 1 mm or 3 mm can be fitted. Also available are contact points with a 2 mm diameter ruby ball.

Standard equipment includes: 1 contact point with tungsten carbide ball 2 mm \emptyset , 1 stem 8 mm \emptyset and 1 spanner for changing the contact points.

Inch Dial Test Indicators

Most modern methods are applied in the production of our high quality Dial Test Indicators. They are both sensitive and shock-resistant.

Here are some of the advantages applicable to the whole series of lnch reading models:

- All features of the models reading up to .04" measuring range conform analogous to the German Standard DIN 2270. This applies to all deviation spans, the measuring force and the hysteresis error of the measuring force.
- Automatic change of the direction of measurement.
- Indication clockwise in all types.

- Precise components, running in ceramic bearings, warrant highest precision throughout.
- Precision bearing for the lever shaft.
- Body with 3 dovetail slides for clamping the stem and other equipment.
- Body hard-chromed in order to protect the dovetail slides against damage.
- Contact points with tungsten carbide ball 2 mm Ø.
- Dial adjustable by knurled bezel.
- Supplied in tasteful boxes with transparent cover with 1 stem Ø ¹/₄" and 1 spanner for changing the feelers.

Range	.008″
Dial reading	0-4-0
Bezel-Ø	1 ⁹ / ₁₆ "
Form to DIN 2270	Α
Accuracy analogous to	DIN 2270
Length of contact point	.490″
Swivelling range of contact point at 90° to the scale	240°
Dimensioned drawing same as K 46 on page 84, b	ut L = .490"

Dial Test Indicators are also available with measuring range extended to .04". Please request our offers for the models K 30/1 Z and K 40/1 Z.

Dial Test Indicator K 34 Z

The Dial Test Indicators K 34 Z and K 45 Z have a 1.4" long contact point which makes them suitable for difficult accessible applications.

Please make sure to use contact points with correct length because of the effect of the angle ratio of the Dial Test Indicator. Using contact points with incorrect length will result in measuring errors.

Standard equipment includes: 1 contact point with 2 mm \emptyset tungsten carbide ball, 1 stem $\frac{1}{4}'' \emptyset$ and 1 spanner for changing the contact points.

Dial Test Indicator K 34 Z	
Reading	.0005″
Range	.020″
Dial reading	0-10-0
Bezel-Ø	1 ¹ / ₄ "
Form to DIN 2270	В
Accuracy analogous to	DIN 2270
Length of contact point	1.400″
Swivelling range of contact point parallel to the scale	240°
Dimensioned drawing same as K 34 on page 84, but	L = 1.400"

Dial Test Indicator K 45 Z	
Reading	.0005″
Range	.020″
Dial reading	0-10-0
Bezel-Ø	1 ⁹ / ₁₆ "
Form to DIN 2270	С
Accuracy analogous to DI	N 2270
Length of contact point	1.400″
Swivelling range of contact point perpendicular to the scale	240°
Dimensioned drawing same as K 45 on page 84, but L =	1.400″

Magnetic Holder P 18

with vertically and horizontally adjustable swivel arm

Its extremely low overall height and simple handling make the Magnetic Holder P 18 very versatile for use in the manufacturing and tool making industry. Two round magnets on the contact face make it a flat and efficiently holding base.

The use of star knobbed screws ensure safe clamping.

Delivery: without Dial Gauge

Magnetic Holder P 19

with vertically and horizontally adjustable swivel arm

The support of the Dial Gauge can be rotated both vertically and horizontally, so that the Dial Gauge can be brought to any position. For that reason there are many possibilities of use.

The Magnetic Holder P 19 has a prismatic base with additional magnets on the wall.

The use of star knobbed screws ensure safe clamping.

Delivery: without Dial Gauge

Magnetic Holder P 18	
Length of the magnetic base	73 mm
Height of the magnetic base	11 mm
Height with holder	46 mm
Breadth of the magnetic base	38 mm
Magnetic force	180 N
Length of swivel arm up to holder opening	35 mm

8 mm H7

Both the Magnetic Holder P 18 and the model P 19 can also be supplied with a holder opening of $\frac{3}{8}''$ instead of 8 mm H7. Please indicate in your order text if a holder opening of $\frac{3}{8}''$ is required.

Small Dial Gauge KM 4 T Magnet

Dial Gauge M 2 T Magnet

with magnetic back

with magnetic back

The Dial Gauges KM 4 T Magnet and M 2 T Magnet have a magnetic back. These Dial Gauges therefore don't require any stands or holders.

The magnets are made of sintered metal which can in no way affect the mechanism or the accuracy of the Dial Gauges. Magnetic back plates can also be used on other Dial Gauges of our manufacturing programme.

Spindle and stem are made of resistant stainless steel.

Magnetic Stand P 17

with on/off switch and fine adjustment

Magnetic Base for P 17

The magnetic base with thread M 10 has a prismatic bottom. It securely holds on any flat or cylindrical, iron or steel surface.

The magnet is activated by turning the toggle handle. Turning the handle to the 0-position switches the magnet off, turning it to the 1-position switches the magnet on.

Post and Support Arm

Assemblies for P 17

The fine adjustment feature of the Post and Support Arm Assemblies for the P 17 guarantees safe and accurate measuring.

The Post and Support Arm Assemblies for the P 17 are also available as special execution with 400 mm resp. 450 mm height of the vertical column or with 300 mm long horizontal arm.

Scope of supply:

The Magnetic Stand P 17 is supplied completely mounted with Magnetic Base.

Post and Support Arm Assemblies and the Magnetic Base for P 17 are separately available.

A wooden box is supplied at an extra charge.

Delivery: without Dial Gauge

Magnetic Stand P 17

Length of the magnetic base	70 mm
Height of the magnetic base	65 mm
Breadth of the magnetic base	46 mm
Magnetic force	450 N
Length of the horizontal arm	180 mm
Diameter of the horizontal arm	16 mm
Fine adjustment	yes
Length of the vertical column	220 mm
Diameter of the vertical column	16 mm
Holder opening	8 mm H7

The Magnetic Stand P 17 can also be supplied with a holder opening of 10 mm H7. Order text: P 17 (10 H 7).

Precision Measuring Table P7

The Precision Measuring Table P 7 is sturdily built and accurately finished. Its surface plate is hardened, ground and lapped. It is separated from the main body resting on three support points.

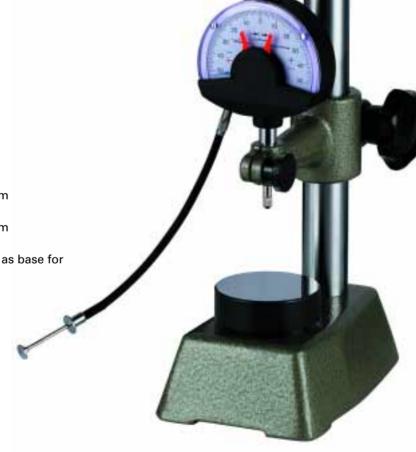

The carrying arm is adjustable for height on the vertical column. The column is hardened and ground.

100 mm
50 mm
22 mm
50 mm

If desired, the Measuring Table P 7 is also available with special fittings:

- Measuring Table P 7 with fluting
- Measuring Table P 7 with measuring ball Ø = 30 mm
- Measuring Table P 7 with measuring height of 165 mm
- Measuring Table P 7 with measuring height of 215 mm
- Measuring Table P 7 with measuring height of 315 mm
- Measuring Table P 7 with circular support plate of Ø 80 mm
 Measuring Table P 7
- Measuring Table P 7
 with circular support plate of Ø 90 mm
 Measuring Table P 7
- with adjustable support plate for use as base for table-thickness gauges

Delivery without Dial Gauge.

Other Measuring Tables with different heights, support plates and in special executions are available on request.

Saw Setting Dial Gauge

with dial on both sides

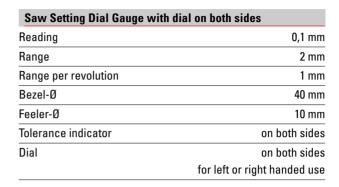

The advantages of having a correctly set saw for all sawing work are well known. By using a Saw Setting Dial Gauge any specified set for various kinds of timber can be exactly maintained, thus ensuring maximum output and efficient workmanship.

The method of measuring could not be simpler. The Gauge is laid on the saw blade so that the sprung tracer touches the cutting edges of the saw. The pointer gives instant reading of the measurement. As the Gauge has a dial on both sides, it can be used either left or right handed.

The standard models of our Saw Setting Dial Gauges are supplied with flat feelers 10 mm Ø. If desired Saw Setting Dial Gauges are available with special feelers.

- Saw Setting Dial Gauge with flat feeler 4,8 mm Ø (model C)
 Sam O titles Dial Queues
- Saw Setting Dial Gauge with pointed feeler (model B)
 Sam Setting Dial Operation
- Saw Setting Dial Gauge with spherical feeler

Please request our offers.

If desired, the Saw Setting Dial Gauge is also available with special fittings:

- Saw Setting Dial Gauge with 0,01 mm reading
- Saw Setting Dial Gauge with short case to drawing K 2/42
- Saw Setting Dial Gauge with supporting plate to drawing K 2/43
- Saw Setting Dial Gauge with vertical feet to drawing K 2/60

Saw Setting Dial Gauge Z

inch reading, with dial on both sides

The advantages of having a correctly set saw for all sawing work are well known. By using a Saw Setting Dial Gauge any specified set for various kinds of timber can be exactly maintained, thus ensuring maximum output and efficient workmanship.

The method of measuring could not be simpler. The Gauge is laid on the saw blade so that the sprung tracer touches the cutting edges of the saw. The pointer gives instant reading of the measurement. As the Gauge has a dial on both sides, it can be used either left or right handed.

- Saw Setting Dial Gauge Z with pointed feeler (model B) see photo at the bottom right
- Saw Setting Dial Gauge Z with spherical feeler

Please request our offers.

If desired, the Saw Setting Dial Gauge Z is also available with special fittings:

- Saw Setting Dial Gauge Z with short case to drawing K 2/42
- Saw Setting Dial Gauge Z with supporting plate to drawing K 2/43
 Saw Setting Piel Cauge Z
- Saw Setting Dial Gauge Z with vertical feet to drawing K 2/60

Dial Depth Gauge TM/2

with matt chromed measuring base

The base is matt chromed, hardened and lapped.

The metal collet attachment guarantees reliable fixing of the Dial Gauge. An additional internal hexagon screw makes exchanging the Dial Gauge easier.

The Dial Depth Gauge TM/2 is supplied completely mounted with base TB 80 and the 10 mm long measuring insert 573/21.

Dial Depth Gauge TM/2	
Reading	0,01 mm
Range	10 mm
Range per revolution	1 mm
Bezel-Ø	58 mm
Base dimensions	80 x 16 mm
Accuracy according to	DIN 878
	hysteresis fu however not checked
Dial reading	anti-clockwise

Inch Dial Depth Gauge TZ/2

Käfer

with matt chromed measuring base

The Dial Depth Gauge TZ/2 bears the same technical features as the model TM/2 except for the reading of .001".

The pointed insert 573/13 is of the same overall length as the standard feeler 573/21. It is suitable for measuring the depth of an engraving.

Spare Dial Depth Gauges are supplied with feelers 573/21, but without base.

Dial Depth Gauge TZ/2	
Reading	.001"
Range	.400″
Range per revolution	.100″
Bezel-Ø	58 mm
Base dimensions	80 x 16 mm
Accuracy analogous to	DIN 878
	hysteresis fu however not checked
Dial reading	anti-clockwise

Bases for Dial Depth Gauges

For the Dial Depth Gauges, 4 bases are available with the following dimensions:

Base TB 50	50 x 16 mm
Base TB 80	80 x 16 mm
Base TB 120	120 x 20 mm
Base TB 150	150 x 20 mm

The bases are interchangeable. Each base has a bore of 8 mm Ø H7. It is matt chromed and hardened. The contact face is lapped. The metal collet attachment guarantees reliable fixing of the Dial Gauges.

Dial Depth Gauge TM 2/30

with matt chromed measuring base

The concentric millimetre pointer allows easy and safe reading of the Dial Depth Gauge TM 2/30. It is supplied completely mounted with measuring insert 573/21 and base TB 80.

Spare Dial Depth Gauges are supplied with feelers 573/21, but without base.

Inch Dial Depth Gauge TZ 2/30

with matt chromed measuring base

The Dial Depth Gauge TZ 2/30 bears the same technical features as the model TM 2/30 except for the reading of .001".

Extensions are suitable accessories for Dial Depth Gauges. They are available in lengths from 10 to 100 mm and from .400" to 4.000". Please take note of the range of products on pages 80 and 82 of our catalogue.

Dial Depth Gauge TZ 2/30	
Reading	.001″
Range	1.000″
Range per revolution	.100″
Bezel-Ø	58 mm
Base dimensions	80 x 16 mm
Accuracy analogous to works standard	1.0200.9.0014
hysteresis fu however not checked	
Dial reading	anti-clockwise

Replacement Dial Gauges are available for all Dial Depth Gauges. Their dials read anti-clockwise. They are equipped with 10 mm long ball inserts 573/21.

We can also manufacture other kinds of Dial Depth Gauges which are not illustrated in this catalogue:

- Profile Dial Depth Gauge for car tyres
- Profile Dial Depth Gauge for truck tyres
- Dial Depth Gauge TM 2/30 Micro for small diameter blind bores

Please request our offers for these special types.

Dial Depth Gauge TU 10

rack with through-bore

Dial Depth Gauge TU 10	
Reading	0,01 mm
Range	10 mm
Range per revolution	1 mm
Bezel-Ø	58 mm
Base dimensions	80 x 16 mm
Accuracy according to	DIN 878
	hysteresis fu however not checked
Rack	with through-bore
Dial reading	anti-clockwise

The rack in the Dial Depth Gauges TU 10 and TU 30 is bored all the way through axially. This allows the accommodation of the adjustable Depth Measuring Needle TU 2 with a \emptyset of 2 mm to the measuring depth of up to 200 mm.

The Depth Measuring Needle TU 2 is adjusted by means of the knurled steel collet.

The Dial Depth Gauges TU 10 and TU 30 can be used in conjunction with all Measuring Bases described on page 99. As standard they are supplied without Measuring Base and without the Depth Measuring Needle TU 2.

Dial Depth Gauge TU 30

rack with through-bore

Dial Depth Gauge TU 30

Digital Depth Gauge TMD 12

with matt chromed measuring base and digital display

The base is matt chromed, hardened and lapped.

The metal collet attachment guarantees reliable fixing of the Dial Gauge. An additional internal hexagon screw makes exchanging the Dial Gauge easier.

The Digital Depth Gauge TMD 12 is supplied completely mounted with base TB 80 and the 12 mm long measuring insert 573/18 with a ball Ø of 1 mm.

Digital Depth Gauge TMD 12	
Resolution	0,01 mm / .0005"
Range	12,5 mm / .5"
Digital display LCD, height of digits	8,5 mm
Measuring system	inductive
Power supply	on Lithium battery 3V
Battery life	3000 h
Output	RS 232, optoelectronic
Working temperature	+5 °C up to + 40 °C
Maximum error	20 µm / .0008"
Measuring direction	anti-clockwise

Digital Depth Gauge TMD 25

with matt chromed measuring base and digital display

The Digital Depth Gauge TMD 25 bears the same technical features as the model TMD 12 except for the range of 25 mm.

Both models can be set to Inch-display, their resolution is then .0005".

Spare Digital Depth Gauges are supplied with feelers 573/18, but without base.

Bases for Digital Depth Gauges

For the Digital Depth Gauges, 4 bases are available with the following dimensions:

Base	ТΒ	50
Base	ΤВ	80
Base	ΤВ	120
Base	ΤВ	150

50 x 16 mm 80 x 16 mm 120 x 20 mm 150 x 20 mm

All bases have a bore Ø of 8 mm H7. They are mutually interchangeable. The bases are matt chromed and hardened. Their support faces are lapped. The metal collet attachment guarantees reliable fixing of the Dial Gauges.

102

Quickmess Basic

with integrated measuring stops \emptyset 1, 3 and 5 mm

Quickmess Basic Large

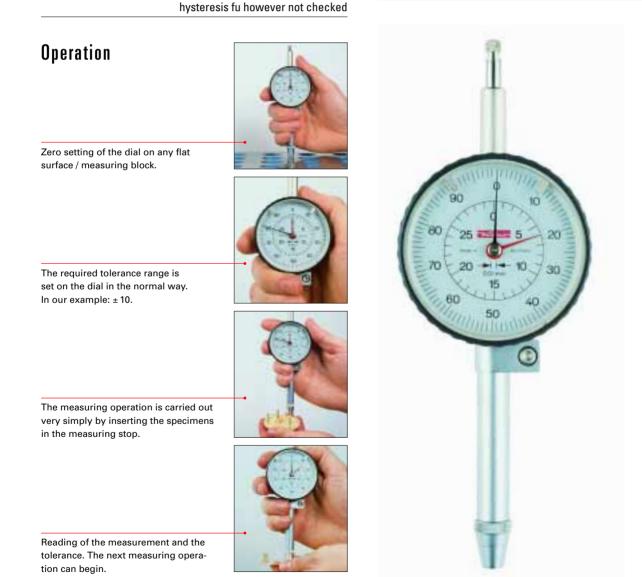

with integrated measuring stops choice of Ø from 8 - 20 mm

Due to its integrated measuring stop, Quickmess eliminates the need of a special inspection room when measuring small parts with a diameter of up to 20 mm and a maximum length of 30 mm. For the measuring operation, the specimen is inserted into the measuring stop. It pushes the measuring insert upwards. The stop limits the stroke of the spindle to the distance that requires measurement.

Quickmess Basic	
Reading	0,01 mm
Range	30 mm

Quickmess Maxi with integrated measuring stop Ø 1, 3 and 5 mm

Quickmess Maxi Large

with integrated measuring stop choice of Ø from 8 – 20 mm

50

Quickmess Maxi has a presetting facility in addition to its integrated measuring stop. This makes it child's play to set tools properly. The tool is only fixed loosely and is then inserted in the measuring stop. The pre-set measuring range with the fixed measuring pin positions the tool at the correct, preset length.

The feelers listed in the column 'standard' will be mounted unless the order calls for specials. Thickness Gauges can be supplied with feelers listed in the column 'available on request' without extra costs.

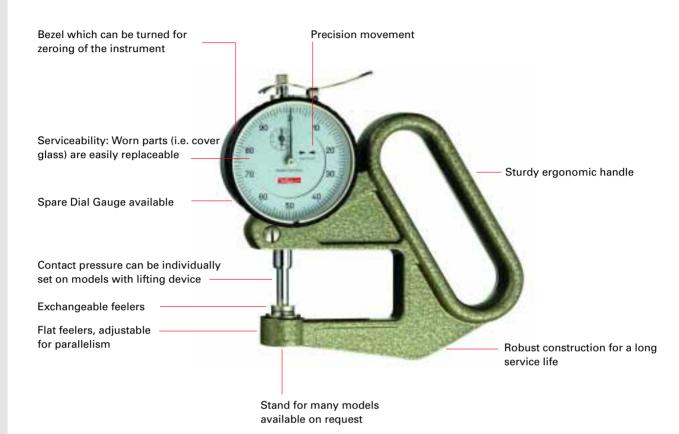

Schematic diagrams of the feelers style a, b, c, d and e can be found on page 107.

Thickness Gauges adding ,D' in the type designation possess a digital indicating instrument.

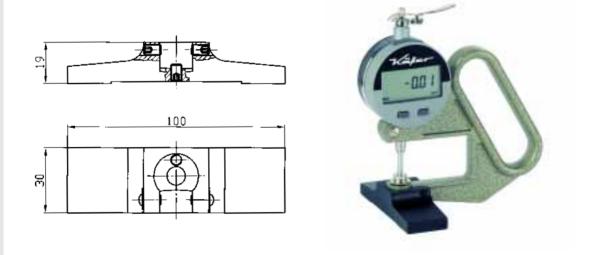

Technical merits

of our Dial Thickness Gauges with large frame depth

Stand 2.1670

This Stand converts the Dial Thickness Gauges K 50, K 100, J 50, J 100 and F 1101/30 as well as the respective digital models, designed for hand-held use, to table models. Retrofitting this Stand to older models is possible.

Feelers

for Dial Thickness Gauges with large frame depth

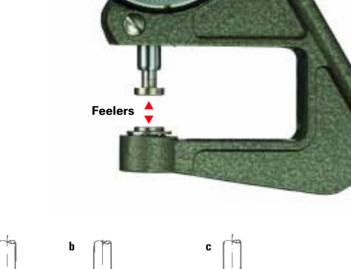

Dial Thickness Gauges are used for measuring the thickness of a very wide range of materials such as leather, paperboard, paper, felt, rubber, glass, sheet, metal, films, plywood and plastics. The shape of the feelers should be adapted to the material being measured.

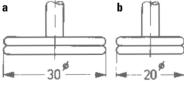

We normally supply all our Dial Thickness Gauges with feelers to form c as standard, unless otherwise stated in this catalogue. Gauges can be supplied with other forms of feelers (a, b, d or e) at no extra cost. Should you require a non standard feeler, please state on your order the type of feeler we must supply (for example: Dial Thickness Gauge J 50 with feelers form a).

Special flat feelers up to diameter of 56 mm are available at additional cost. These include feelers with precise contact area, for example \emptyset of 11,3 m to give 1 cm² of contact area.

A new attachment, 3.2272, with a female thread M 2,5 is available for Dial Thickness Gauges types K and J 50 - 300. This attachment enables the use of profiled feelers shown on the catalogue pages 79 and 80.

rubber, felt, soft materials

soft leather, cardboard, paper, foils

hard leather, plywood, fibrous plates

sheets, hard materials

Dial Thickness Gauge K 50

In standard execution the Dial Thickness Gauge K 50 will be supplied with feelers form c.

When ordering, please state whether you require another form of feelers than form c. The forms of feelers a, b, d or e are available at the same price. Flat special feelers with special diameters of up to 56 mm Ø are available for a surcharge.

Spare Dial Gauge for K 50

The Spare Dial Gauge for K 50 is equipped with the extension 3.2236. This extension with M 3 male thread is required for mounting the upper feelers form a and b. When fitting feelers form c, d or e then it is necessary to remove this extension.

For a surcharge we will supply the Spare Dial Gauge for K 50 with the upper feeler form a, b, c, d or e.

Optional feelers	forms a, b, c, d or e

Model **K 50 with lifting device** has the same technical specification as model K 50 with pressure lever. At rest the feelers are closed. This style has the advantage that the contact pressure of 0,5 N is applied independently of the user. The **Spare Dial Gauge for K 50 with lifting device** will be supplied without lifting device unless requested on the order.

Dial Thickness Gauge K 50/2

Dial Thickness Gauge K 50/3

The Dial Thickness Gauges K 50/2 and K 50/3 differ only in measuring range and the kind of revolution counter. On model K 50/3 the counter is designed as linear auxiliary scale while on model K 50/2 it is a revolution counter with a small hand.

Variants with push-on rod and additional weights on request.

Dial Thickness Gauges K 300 and K 400

The Dial Thickness Gauges K 200, K 300 and K 400 have the same form of jaw. Only the depth of jaw is different.

The use of aluminium for the body of the instruments makes them light and easy to handle. A mounting device makes it possible to use them as a table unit.

Additonal weigths for K 200 - K 400

Additional weights are available to increase the contact pressure on Dial Thickness Gauges K 200 to K 400.

These weights can be attached to the shaft at the top of the Dial Gauge.

Please contact us for further details.

Digital Thickness Gauge JD 50/25

with lifting device

Digital Thickness Gauge JD 100/25

with lifting device

The use of a frame with large frame height together with a Digital Dial Indicator with 25 mm measuring range and a reinforced lifting device attached to the rear results in a Thickness Gauge which combines the advantages of easy handling and large measuring range suitable for various applications. Together with the Stand 2.1670 this converts a portable instrument quickly without complications to a table instrument.

The following functions can be used for all Digital Dial Gauges in connection with our Thickness Gauges:

- Zero setting
- Data transmission Ref I / Ref II
- mm/inch selection
- Memory set Hold Preset value recall
- Selection of measuring direction
- Selection of reading (only FD series)
- Data request by any ASCII Code

 - 0,001 mm/ .00005" 25 mm / 1"
- Digital Thickness Gauge FD 100/25 0,001 mm / .00005" resolution 25 mm / 1" range depth of jaw 100 mm

Dial Thickness Gauge J 200

Dial Thickness Gauges J 100 and J 200 differ only by their jaw depth and by the kind of lifting device. On model J 100 the latter is positioned on top of the Dial Gauge. On the Dial Thickness Gauge J 200 the lifting lever is attached to a pin through the measuring spindle. Because of the use of a reinforced frame for J 200 this model can just as the model J 200/30 only be supplied as portable instrument without stand.

Dial Thickness <u>Gauge F 50</u>

with lifting device

High resolution while offering a relative large measuring range distinguishes this Dial Thickness Gauge. The lifting device provides the initial measuring force of 1,2 N independent of the user.

In standard execution the Dial Thickness Gauge F 50 will be supplied with feelers form c. When ordering, please state whether you require another form of feelers than form c. The forms of feelers a, b, d or e are available at the same price.

Spare Dial Gauge for F 50

with lifting device

Spare Dial Gauges for the model F 50 with lifting device will be supplied like all the other Spare Dial Gauges without lifting device and without feeler but with extension 3.2236.

Delivery of a Spare Dial Gauge for F 50 with the upper feeler form a, b, c, d or e at a surcharge.

Optional feelers	forms a, b, d or e

Spare Dial Gauges are available for all Digital Thickness Gauges. They will be delivered without feeler and without lifting device but with extension for mounting the upper feelers form a or b. For the feelers form c, d and e the extension is not required.

For all Digital Thickness Gauges the data connection cable DCMD 232, illustrated on page 74, can be used as suitable accessory.

Feelers for Pocket Dial Thickness Gauges

Pocket Dial Thickness Gauges are used for measuring the thickness of a very wide range of materials such as leather, paperboard, paper, felt, rubber, glass, sheet, metal, films, plywood and plastics. The shape of the feelers should be adapted to the material being measured. If other feelers than the standard feelers are required then this is to be stated in the order. (Example: J 45 with spherical feelers). Standard feelers 6,35 mm Ø flat will be supplied unless otherwise stated on the order. The other three anvils shown below are available on request. The type of feeler does not affect the price of the Dial Thickness Gauge. Please note that the feelers are not interchangeable.

The Thickness Gauges K 15, K 15/2, J 15 and J 45 with feelers 10 resp. 14 mm \emptyset , ground down at the rear, are available at a surcharge. In this case the instrument is placed flat down on the table and is thus best suited for batch measurements of small components.

The Pocket Dial Thickness Gauges K 15 and K 15/2 are supplied with flat feelers 6,35 mm Ø if no other form of feelers is ordered. When ordering, please state whether you require another form of feelers than 6,35 mm Ø flat. The optional feelers 10 mm Ø flat, convex or spherical are supplied at the same price. As the feelers are pressed in into the frame they are not individually exchangeable.

On request the Pocket Dial Thickness Gauges K 15 and K 15/2 can be supplied with a spindle blocking screw. The instruments can easily be set to zero by turning the knurled bezel.

Foil Dial Thickness Gauge F 1101/30

This handy instrument is used exclusively to measure the thickness of thin foils. The frame has the required rigidity, the insulation of the handle prevents transfer of heat from the hand of the user to the sensitive mechanical parts of the Dial Gauge.

One revolution of the pointer equals 0,1 mm. Because of the 100 divisions on the scale the measuring result can be more easily and more accurately read off as on the predecessor model F 1000/30.

The measuring force is approximately 2 N. If required the instrument can be supplied with a lower measuring force of 0,7 N.

Standard feeler	6,35 mm Ø flat
Optional feelers	10 mm Ø flat, spherical
	upper feeler convex r = 15 or r = 40,
	lower feeler flat or convex r = 15

The predecessor model F 1000/30 of the new Foil Dial Thickness Gauge F 1101/30 is still available. One revolution of the pointer equals 0,2 mm corresponding to 200 graduations. Its measuring pressure is approximately 2 N. If required it can be supplied with a higher measuring force of 4,5 N or with a lower measuring force of 1,2 N.

<u>Corrugation Dial Thickness Gauge J 50/3 WP</u>

to EN 494

This handy Dial Thickness Gauge is used exclusively to measure the thickness of fibre - cement profiled sheet and other corrugated plates or irons. It is equipped with special feelers which have a camber of 2 mm and a width of 10 mm.

The concentric millimetre pointer allows easy and safe reading of the Dial Thickness Gauge.

In addition other purpose made Dial Thickness Gauges i.e. for leather or Pocket Dial Thickness Gauges for gauging precious stones are available on request.

Inch Reading Thickness Gauges

Considering frame execution and feelers, Inch Reading Dial Thickness Gauges conform to the metric models. This also applies to the M 3 thread of the Dial Gauges which is the same as in the metric models of Thickness Gauges. The feelers are interchangeable between metric and Inch models.

Inch Reading Dial Thickness Gauges differ from the models illustrated in the catalogue for metric reading

only by the scale division in Inch and the scale marking.

Thickness Gauges bearing the additional ,D' in their designation possess a digital indicating instrument.

The display can be selected to be either metric or Inch and therefore these instruments are listed in the table of metric models, too.

The feelers listed in the column 'standard' will be mounted unless the order calls for specials. Dial Thickness Gauges can be supplied with feelers listed in the column 'available on request' without extra costs. Schematic diagrams of the feelers style a, b, c, d and e can be found on page 107.

Pocket Dial Thickness Gauge KZ 15

The Pocket Dial Thickness Gauge KZ 15 is supplied with flat feelers 6,35 mm Ø if no other form of feelers is ordered. When ordering, please state whether you require another form of feelers than 6,35 mm Ø flat.

The model KZ 15/2 differs from the model KZ 15 only by the to .800" extended measuring range.

Standard feeler	6,35 mm Ø flat
Optional feelers	10 mm Ø flat, convex or spherical

At rest the feelers on models KZ 15 and KZ 15/2 are open. Pushing the button on top of the instrument brings them together.

The feelers are in contact when the Pocket Dial Thickness Gauges JZ 15 and JZ 45 are not in use. The serrated lifting wheel opens them for the insertion of the component. The size can be easily read off the scale. The instruments can be zeroed by using the knurled adjusting bezel.

Standard feelers 6,35 mm Ø will be supplied unless otherwise stated on the order. Optional feelers are available on request. The type of the feeler does not affect the price of the Pocket Dial Thickness Gauges. Please note that the feelers are not interchangeable.

Pocket Dial Thickness Gauge JZ 15

The Pocket Dial Thickness Gauge JZ 15 distinguishes itself distinctly by its up to date and ergonomical design.

The Pocket Dial Thickness Gauge JZ 15 is equipped with plastic insulating plates. It is supplied in a transparent plastic case.

The Pocket Dial Thickness Gauge JZ 45 is of similar design except for the jaw depth of 45 mm.

.001"

.040"

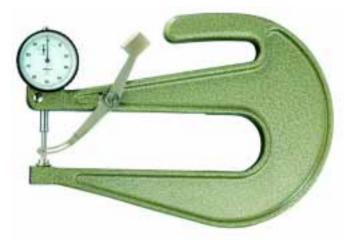

Dial Thickness Gauge JZ 200

Dial Thickness Gauges JZ 100 and JZ 200 differ only by their jaw depth and by the kind of lifting device. On model JZ 100 the latter is positioned on top of the Dial Gauge. On the Dial Thickness Gauge JZ 200 the lifting lever is attached to a pin through the measuring spindle. Because of the use of a reinforced frame for JZ 200 this model can just as the model JZ 200/30 only be supplied as portable instrument without Stand.

With the exception of Pocket Dial Thickness Gauges, Spare Dial Gauges are also available for Inch Reading Thickness Gauges. They have like all the other Spare Dial Gauges a M 3 thread and will be supplied without feeler but with extension 3.2236.

For a surcharge we will supply all Spare Dial Gauges with the upper feeler form a, b, c, d or e.

Foil Dial Thickness Gauge FZ 1101/30

This handy instrument is used exclusively to measure the thickness of thin foils. The frame has the required rigidity, the insulation of the handle prevents transfer of heat from the hand of the user to the sensitive mechanical parts of the Dial Gauge.

The measuring pressure is approximately 2 N. If required the instrument can be supplied with a lower measuring force of 0,7 N.
